

MINOR PROJECT

Synthetic Data Generation & Database Storage

Prepared By

Poonam Rajput

SQL (Structured Query Language)

- 🚀 **Standardized programming language** used for managing relational databases
- 🚀 Used to:
 - Manage and manipulate relational databases
 - Perform operations like querying, updating, inserting, and deleting data
 - Control database structure and access

SQL Types

- **MySQL:** Open-source relational database management system
- **PostgreSQL:** Advanced open-source object-relational database system
- **SQLite:** Lightweight, serverless SQL database used for testing and prototyping
- ☐ **Microsoft SQL Server:** Relational database management system developed by Microsoft
- **Oracle:** Multi-model database management system produced by Oracle Corporation

SQLite

📌 **Why SQLite?** It is a great way to practice SQL because:

- Lightweight database engine
- Serverless → does not require separate server installation
- Python compatible (built-in support via SQLite3 module)
- SQLite3 is preinstalled with Python (version > 2.5)

Generating Synthetic data

```
In [ ]: import numpy as np
import pandas as pd

np.random.seed(45)
n_student= 1000
data={
    "name":np.random.choice(["Poonam", "Riy", "Shagun"],n_student),
    "age":np.random.randint(18,25,n_student),
    "city": np.random.choice(["Ynr", "Radaur", "KUK"],n_student)
}
df =pd.DataFrame(data)
```

In [140...

df

Out[140...

	name	age	city
0	Shagun	21	KUK
1	Poonam	24	KUK
2	Poonam	19	KUK
3	Riy	20	KUK
4	Riy	21	Radaur
...	...	...	...
995	Shagun	19	KUK
996	Riy	24	KUK
997	Shagun	23	Ynr
998	Riy	19	Radaur
999	Shagun	21	KUK

1000 rows × 3 columns

Creating Connection with Database

```
In [141... import sqlite3 as sql
import pandas as pd
```

```
In [142... # connect to a database [Create if it doesnot exist]
connection= sql.connect('demo6.db')
```

```
In [143... # creating a cursor object using th connection
cursor = connection.cursor()
# cursor helps us to traverse over the records in a db
```

```
In [145... cursor.execute("""CREATE TABLE data6(
    id INTEGER PRIMARY KEY,
    name TEXT NOT NULL,
    age INTEGER,
    city TEXT
) ;""")
```

```
Out[145... <sqlite3.Cursor at 0x216b26d7440>
```

```
In [146... connection.commit()
```

Covering DataFrame Into Tuple And Inserting into Table

```
In [147... student_data=list(df.itertuples( index=False, name= None))
cursor.executemany('INSERT INTO data5(name,age,city)VALUES(?,?,?)', student_
```

```
Out[147... <sqlite3.Cursor at 0x216b26d7440>
```

```
In [148... connection.commit()
```

```
In [149... cursor.execute('SELECT * from data5')
```

```
Out[149... <sqlite3.Cursor at 0x216b26d7440>
```

```
In [150... results= cursor.fetchall()
```

Fetchng From Table & Printing Data

```
In [151... for record in results:
    print(record)
```
